DIALWRX

300 400 500 600 700

RANGE IT. DIAL THE MARK.

PRINT YOUR DIAL TONIGHT.

Distance marks for your rifle and load. No phone or app in the field. A clear mark to dial to, even with gloves on.

Example marks only. Verify your own distances with live fire.

Pick your scope. Enter your load. Print.

The builder shows the tape as you work. Colors, wrap rows, and reference marks update on screen. Download a sample without an email to check fit and style.

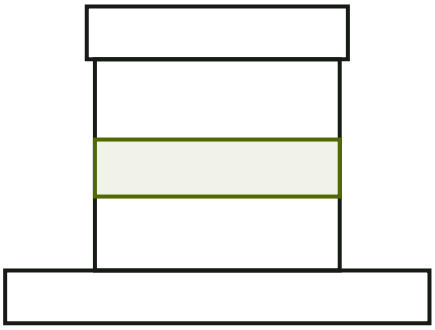

The sample PDF uses demo marks. Your purchased PDF uses your load and prints at the size your turret needs.

One custom setup is $25: one rifle, load, and turret configuration, with 10 matching cutout tapes in a PDF. Print at home. Nothing ships.

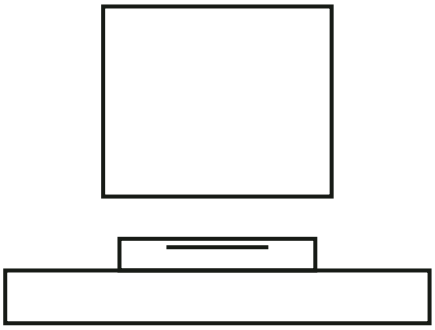

A QUICK FIT CHECK

WILL IT FIT YOUR SCOPE?

Look for an exposed elevation turret with a smooth, flat band. A coin-slot adjustment under a cap will not take a tape.

Exposed: check the band

Capped coin-slot: won't fit

Measure across the smooth band with calipers, or print the builder's sizing gauge at 100%. Not sure? Reply with a clear turret photo, or email info@dialwrx.com.

A few numbers. Room to update.

Enter the exact bullet, confirmed zero, and bore-to-scope sight height. Box velocity is fine to start. Chronograph later and update free.

Only projectile identity locks: ammo, BC, weight, and drag model. Velocity, zero, conditions, and style updates stay free for life. Other eligible inputs get one correction within 7 days. Reprinting downloaded PDFs is unrestricted.

Update frequency may be limited for abuse, service capacity, or operating costs. See dialwrx.com/terms.html#update-frequency.
